Education

Manipal Institute of Technology, Manipal
B.Tech in Computer and Communication Engineering

Expected Graduation: 2027

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Computer Networks and Protocol, Database Management Systems, Operating Systems, Software Design Technology

Experience

Microsoft
Technical Consultant Intern

May 2026 – July 2026

- Migrated an internal Project Manager AI agent from a low-code setup to a pro-code architecture on Azure AI Foundry with sub-agent orchestration, and deployed it to Teams & M365 Copilot, replacing manual Excel-based metric calculation.
- Built the agent's observability layer with OpenTelemetry, Application Insights, and Power BI, tracking active users, sub-agent usage, and token consumption. This gave leadership its first data-backed view of adoption and cost.
- Added a privacy-conscious memory feature, an Azure DevOps CI/CD pipeline (Terraform and Bicep), and backend work on GCID's in-house gaming platform and got 3rd place in Microsoft Garage Hackathon.

EmergX - AI Hiring Startup
Backend Developer Intern

May 2025 – July 2025

- Collaborated in a team to develop secure and scalable backend APIs for an AI-powered hiring platform.
- Designed and integrated database solutions for efficient job listing storage and retrieval.
- Built Selenium-based web scraping pipelines to automate job data collection and ingestion from multiple platforms.

Student Council MIT, Manipal
Development Team Lead

Dec 2024 – Present

- Led the development of multiple web platforms including the Club Management System, M# Hackathon website, Tech Fest website, Cultural Club website, Judge Portal, and Perm Portal using Next.js and modern web technologies.
- Collaborated in an Agile development team, contributing to sprint planning, code reviews, debugging, deployment, and delivering platforms supporting 4,000+ registrations and 10,000+ website visits.

Projects

Event Judge Platform — TechTatva '25 & Revels '26

- Built a judging and live-results platform that ran scoring for 200+ fest events, with 100+ judges scoring from phones and tablets across multi-round competitions.
- Designed for zero score loss and no tampering: atomic DB transactions, 4-tier RBAC with object-level access control, and audit logs. Blind moderation hid raw scores from organizers to prevent bias.
- Implemented weighted scoring, judge normalization, and tie-breaking, with a live leaderboard for 1,000+ spectators.
- **Tech Stack:** Next.js, TypeScript, Express.js, PostgreSQL, Drizzle ORM, Redis, Docker, JWT, AWS

Fest Food Coupon System — Revels '26

- Digitized the fest's food coupons as a role-based wallet for 500+ concurrent users, with a 3-level budget allocation engine (Admin → HFS → OC/CC/Volunteer) and an automated midnight wallet reset.
- Prevented double-spending and race conditions with row-level locking in ACID atomic transactions, and secured QR payments with 30-second one-time HMAC-signed codes and immutable audit logs.
- **Tech Stack:** Next.js, Django REST Framework, PostgreSQL, Redis, Docker, JWT, HMAC-SHA256, AWS

Fest Entry Scanner — Revels '26

- Developed an offline-first QR entry system on a LAN with no internet, scanning 10,000+ attendees across multiple scanners with sub-100ms verification.
- Eliminated duplicate entries with atomic database writes and encrypted QR verification, with role-based access for admins and scanners, multi-ticket QR support, and bulk Excel attendee import.
- **Tech Stack:** Next.js, Django REST Framework, MongoDB, Gunicorn, Redis, Docker, JWT

Skills

Languages: C++, C, Java, Python, JavaScript, TypeScript, SQL

Technologies & Tools: Next.js, React.js, Node.js, Express.js, Django, PostgreSQL, MongoDB, Redis, Docker, REST APIs, JWT, RBAC, Git, GitHub, Postman, Azure, AWS, CI/CD, Terraform, Azure AI Foundry, Azure DevOps

Certifications: Microsoft Certified: Azure Fundamentals (AZ-900), Microsoft Certified: Azure AI Fundamentals (AI-900), GitHub Copilot (GH-300), Microsoft Certified: AI Business Professional (AB-730)
