Education

Manipal Institute of Technology, Manipal
B.Tech in Computer and Communication Engineering

Expected Graduation: 2027
CGPA: 8.68/10

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Computer Networks and Protocol, Database Management Systems, Operating Systems, Software Design Technology

Experience

EmergX - AI Hiring Startup
Backend Developer - Internship

May 2025 – July 2025

- Collaborated in a team to develop and optimize secure APIs for a hiring platform, performance and data protection.
- Contributed to database design and integration to support scalable job listing storage and retrieval
- Built and deployed Selenium-based web scraping tools to extract job data from various platforms, automating data ingestion into the system

Student Council MIT, Manipal
Development Team Member

Dec 2024 – present

- Built a Club Management System using Next.js to help college administration monitor and manage club events effectively.
- Practiced Agile workflows in a 6-member team under senior mentorship, including sprint planning, structured code reviews, and iterative delivery.
- Contributed to debugging, feature development, and deployment, ensuring a smooth user experience.

M# Hackathon - Tech Tatva

May 2025 – present

Core Committee Member – Technical

- Designed and launched the official hackathon website, achieving 4,000+ registrations and 10,000+ site visits, ensuring smooth event participation for a large-scale audience.
- Collaborating with a cross-functional team to discuss hackathon themes, define problem statements, and coordinate with the Student Council.
- Actively involved in conducting 250+ interviews to onboard junior OC members and support team structuring

Projects

Club Management System – Student Council Dev Team

- Built secure REST APIs for user authentication, event tracking, and club data management using Node.js and MongoDB.
- Designed responsive frontend interfaces for club profile pages and dashboards using Next.js and Tailwind CSS .
- Contributed to database schema design and system architecture for scalable performance and efficient data querying.
- Collaborated on GitHub with a 6-member team, using version control, pull requests, and code reviews.
- **Tech Stack:** Next.js, Node.js, MongoDB, Tailwind CSS, Git

Multithreaded Proxy Web Server(C)- Intermediate Systems Programming

- Engineered a multithreaded proxy web server in C using low-level POSIX system calls, with full support for HTTP GET/POST requests.
- Integrated socket programming (TCP/IP) to handle concurrent client-server communication, with thread pooling for efficient request handling
- Implemented LRU cache with time-based eviction, boosting performance for frequently accessed pages.
- Used mutexes and semaphores for synchronized access to shared resources, preventing race conditions under high load.
- **Key Concepts:** Threads, TCP sockets, LRU cache, mutex locks, semaphores, system calls.

Chat Application with Video Calling

- Built a full-stack real-time chat application with video calling, custom themes, and a smooth, responsive UI .
- Developed core features like friend system, live chat, video calls for a personalized experience
- Used custom React hooks, TanStack Query for efficient data handling, and followed best practices for maintainable code
- Deployed the app and thoroughly tested backend APIs for reliability and performance using tools like Postman
- **Tech Stack:** Node.js, Express, MongoDB, React, TanStack Query, Tailwind CSS .

Technologies

Languages: C++, C, Java, Python, JavaScript

Technologies & Tools: React.js, Next.js, Node.js, MongoDB, PostgreSQL, Tailwind CSS, Bootstrap, Pandas, NumPy, Postman, Ubuntu, Git, GitHub, Microsoft Azure (Fundamentals), Agile Practices
